## Stimulating interest in engineering

"BONE as an Engineering material", "Large area electronics and buckyballs: A Glimpse into the future" and "Explosions on three supertankers: Terrorism or electrostatics".

These were just some of the many interesting engineering-related topics discussed over a period of three days in Sunway College, Petaling Jaya, recently.

The informative public lectures which piqued the minds of many a technically-inclined student were facilitated by academics drawn from member institutions of The Sterling Group of British universities.

This is an informal grouping of research-led universities

which seeks to promote research in engineering courses undertaken in the best British universities.

The talks were well-attended by lecturers, pre-university students who were interested in pursuing courses in engineering as well as those already studying specific areas in the field.

Said Sunway College principal Elizabeth Lee: "We believe that such stimulating lectures provide good opportunities for our students to ask pertinent questions on a range of engineering disciplines and gain invaluable insights from members of the British engineering community."
